Application building using Zia assistance

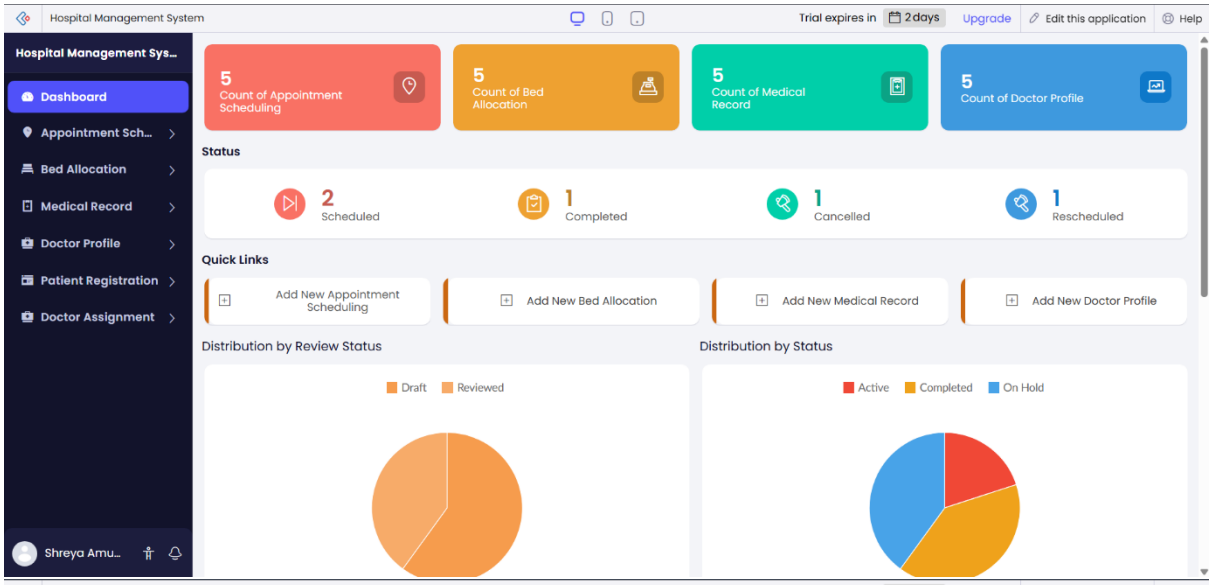

Aim

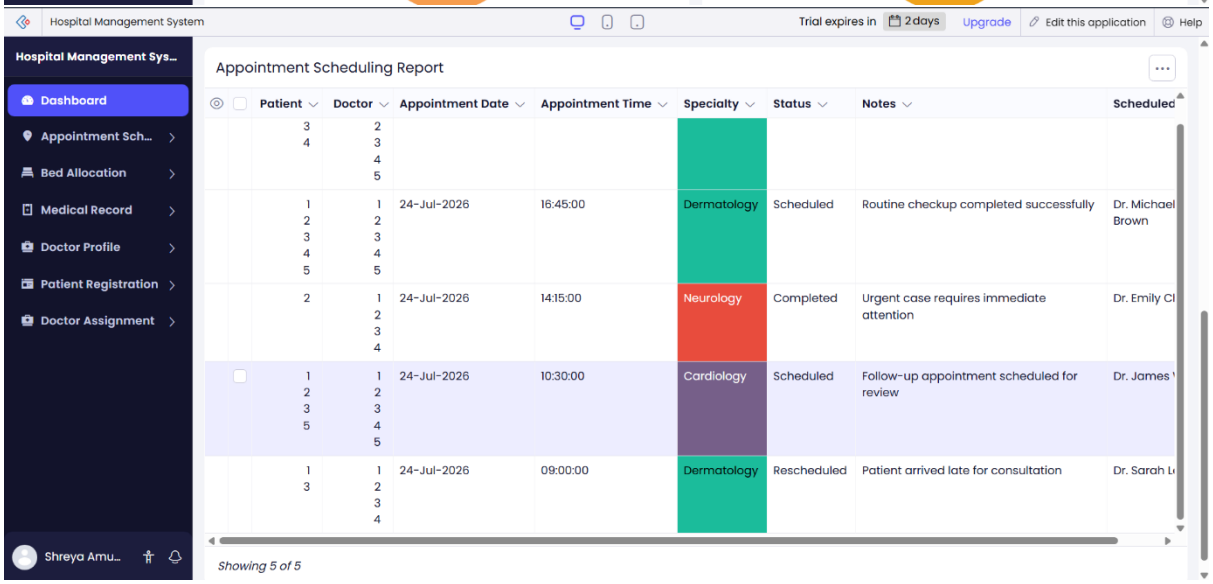

To develop a Hospital Management System application in Zoho Creator using **Zia (AI Assistant)** by generating forms, reports, and dashboards through AI-assisted low-code development.

Procedure

1. Log in to the Zoho Creator platform.
2. Create a new application and launch the **Zia AI Assistant**.
3. Provide prompts describing the Hospital Management System requirements, including modules such as Patient Registration, Appointment Scheduling, Doctor Profile, Bed Allocation, Medical Records, and Doctor Assignment.
4. Allow Zia to automatically generate the required forms, reports, and dashboard components.
5. Review the generated application structure and make any necessary modifications to field names, layouts, or workflows.
6. Test each generated form by entering sample records.
7. Verify that the corresponding reports and boards display the entered data correctly.
8. Save and publish the completed application.

Result

The application was successfully created in Zoho Creator using Zia AI Assistant. The required forms, reports, dashboards, and other application components were generated and configured successfully, demonstrating the efficiency of AI-assisted low-code application development in rapidly building functional business applications.
