Schedule Requirements

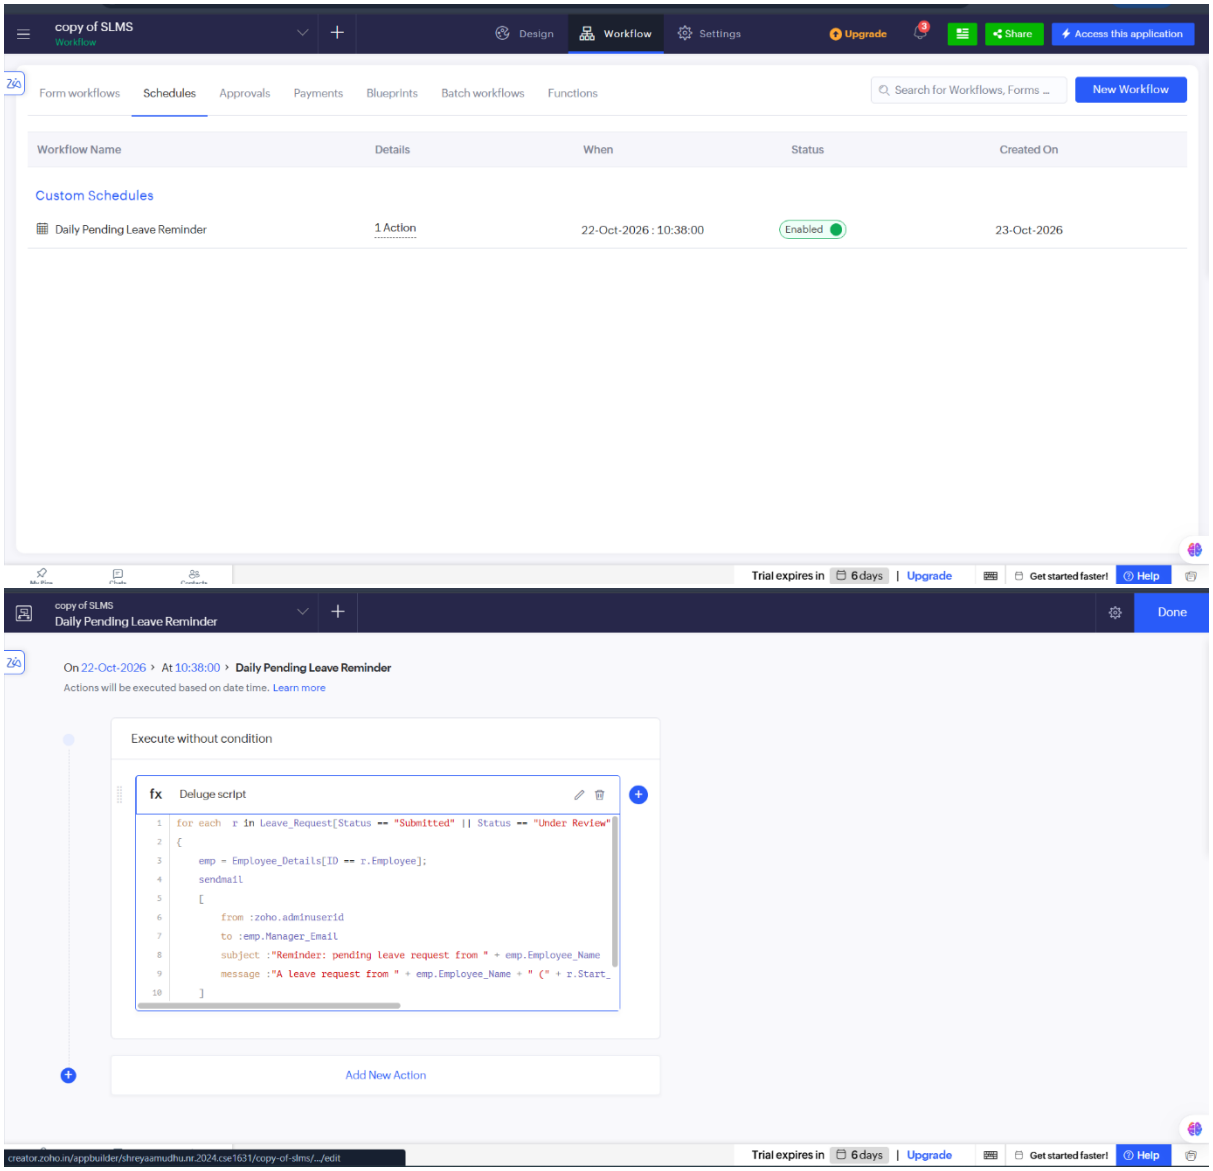

Aim

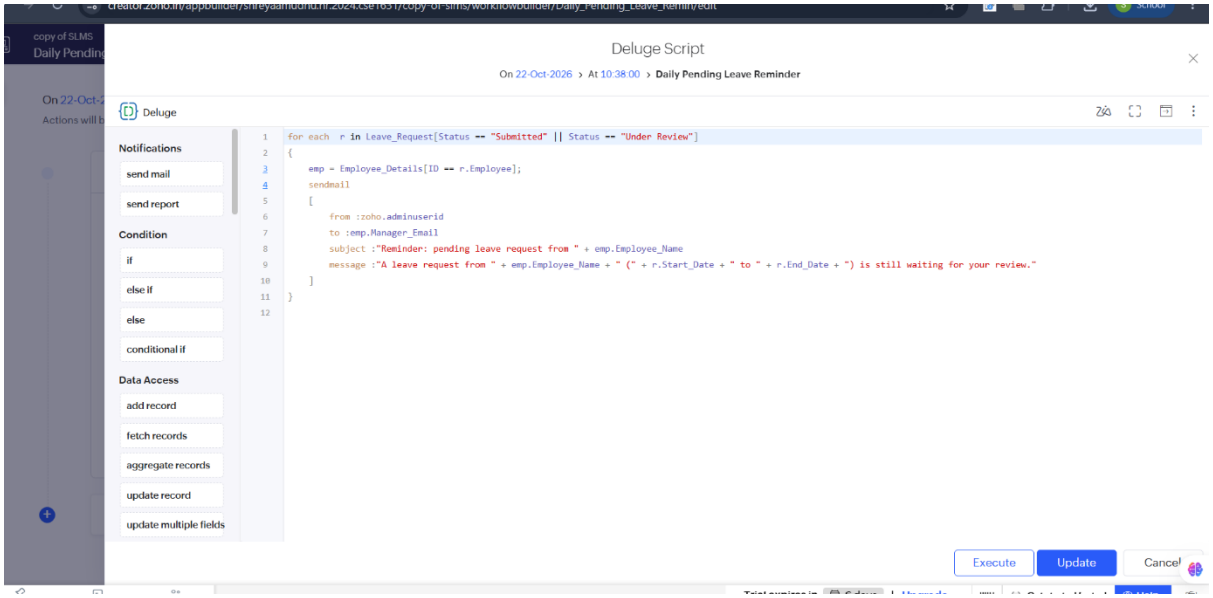

To create a daily schedule in Zoho Creator that reminds managers every day about leave requests that are still pending.

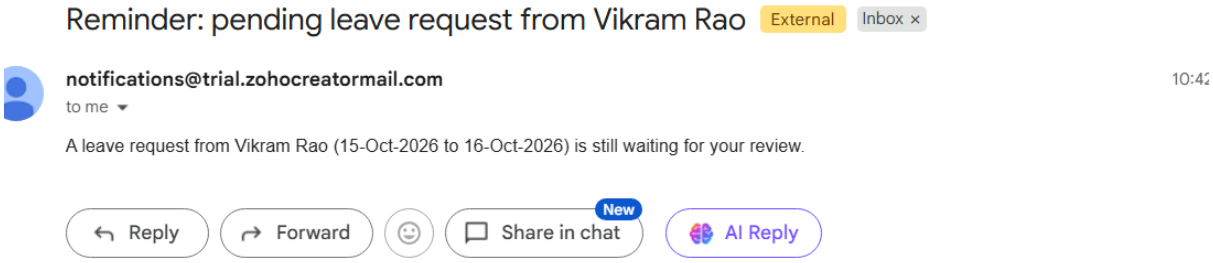

Procedure

1. Go to **Workflows → Schedules → Create New** and name it **"Daily Pending Leave Reminder"**.
2. Set the start date and time, the frequency to **Daily**, and the time zone to **Asia/Kolkata**.
3. Select **On Start** and add a Deluge script action.
4. In the script, loop through Leave_Request records where Status == "Submitted" || Status == "Under Review".
5. For each record, fetch the employee from Employee_Details.
6. Use sendmail to send a reminder to that employee's Manager_Email with the employee name and leave dates.
7. Save the schedule.
8. Keep a pending request in the app and check that the reminder email arrives at the scheduled time.

Screenshots:

Result

The daily schedule runs automatically at the set time. Managers receive a reminder email each day for every leave request still waiting for review.
