Portal

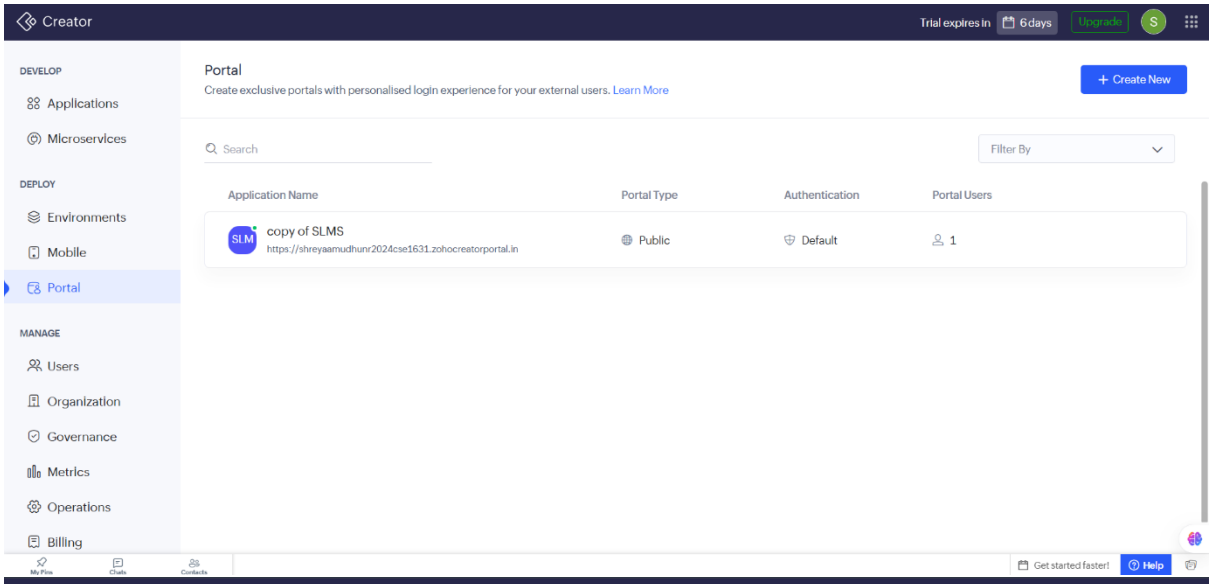

Aim

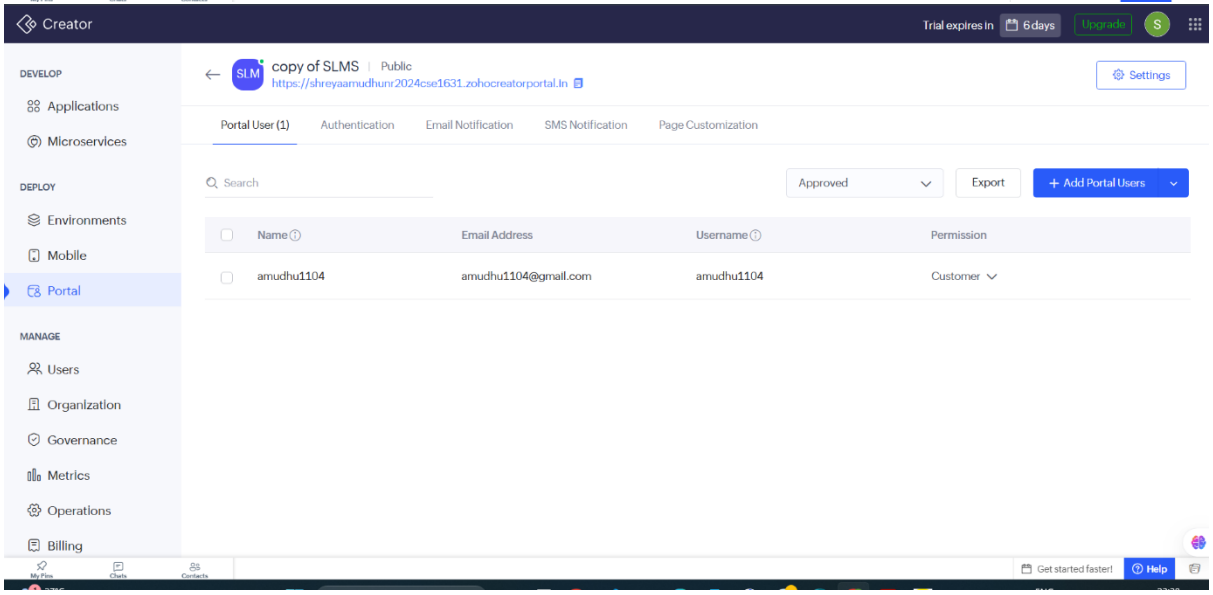

To create a customer portal in Zoho Creator that lets employees log in with their own credentials to apply for leave and view their leave balance and request status in the Smart Leave Management System.

Procedure

1. Open the SLMS application in Zoho Creator, go to Settings → Portal Settings and click Create Portal.
2. Choose the portal type (users from outside your Zoho organization), and enable it with a portal name and the login URL.
3. Go to Share → Portal Profiles and create or edit a profile named Employee, based on the default "Customer" portal profile (add and view access).
4. Set the component permissions for the Employee profile: Leave Request (Create and View), Leave Balance (View), Holiday Details (View), and hide the other forms such as Department Details and Leave Type Details.
5. Add a data filter so that each employee sees only their own records, for example Employee == thisapp.portal.loginUserID.
6. Go to Portal Users → Invite and add the employees using their Work_Email, assigning the Employee profile.
7. Open the portal login link, sign in as an employee, apply for a leave request, and check "My Leave Balance" and the request status.
8. Log in as a different employee to confirm that they cannot see the first employee's records.

Screenshots:

Result

The employee portal was created and tested successfully. Employees log in with their own credentials, apply for leave, and view their balance, holidays and request status. They see only their own data, and the manager's decisions come through the Blueprint
