Blueprint

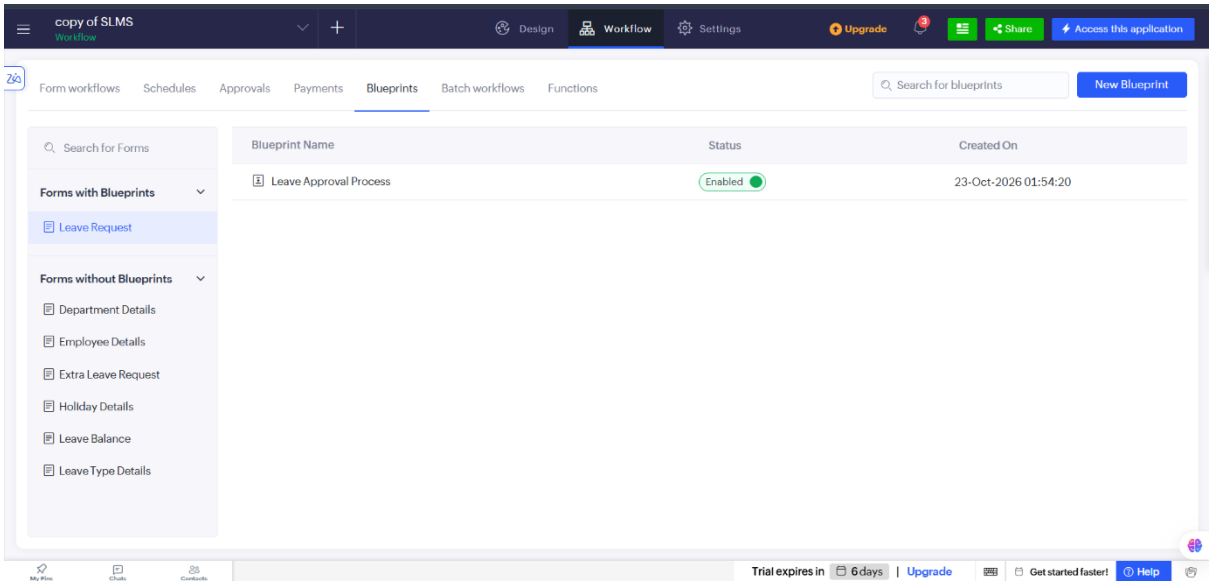

Aim

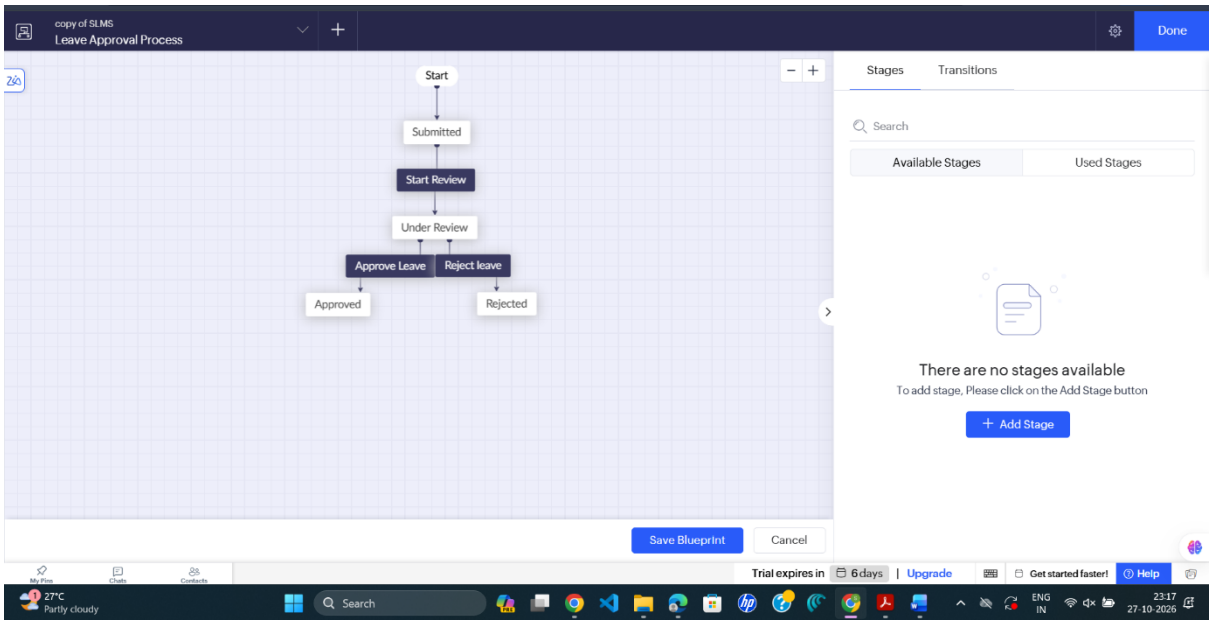

To create a Blueprint in Zoho Creator that controls the Leave Request approval process through the stages Submitted → Under Review → Approved / Rejected.

Procedure

1. In the Leave_Request form, define the stage field with the values **Submitted, Under Review, Approved, Rejected**.
2. Go to **Workflows → Blueprint → Create New**. Name it **"Leave Approval Process"**, select the form **Leave Request**, and set **Submitted** as the start stage.
3. Add the stages on the canvas and create three transitions: **Start Review** (Submitted → Under Review), **Approve Leave** (Under Review → Approved) and **Reject Leave** (Under Review → Rejected).
4. In the **Before** section of each transition, set the transition owner. Use the *Manager permissions* profile for Start Review, and both *HR Admin* and *Manager permissions* for Approve and Reject.
5. In the **During** section of Approve and Reject, show the **Manager_Comments** field so the manager can enter remarks.
6. In the **After** section of Approve, add actions to update Status = "Approved", increase Used_Days in Leave_Balance, and email the employee. In Reject, update Status = "Rejected" and email the employee.
7. Save and publish the Blueprint, then open a Leave Request record and move it through the transitions.
8. Check that the status, leave balance and emails update correctly at each stage.

Screenshots:

Result

The Blueprint was created and executed successfully. Each leave request moves through the defined stages, only authorized users can run each transition, and the employee gets an email with the manager's decision.
